The Symbol

IVS is an institute of scholarship in the field of Visual Arts. The history of visual language within our heritage reflects dynamic continuity and a rich diversity of idiom.

The elements drawn upon to symbolise the identity of the Indus Valley School of Art and Architecture are based on the primary sources of life.

Water symbolises knowledge, its acquisition and dissemination.

Waves symbolise the cyclical motion of life.

Tree symbolises the evolution and growth of thought and vision.

The geometric patterns of the symbol unify space in a rhythmic order; while the sculpted spaces symbolise the sky, the environment, and the limitlessness of human possibilities.

Zahoor-ul-Akhlaq
1941–1999

Mission Statement

In an age of rapid social, technological and aesthetic transition, we feel committed to educating our students with the ability to analyse and critique experience, to nurture their creative abilities so they become active, outstanding members of our society, both personally and professionally.

We wish to go beyond technical instruction by placing emphasis on creative thought and action.

Each department, despite its individual character functions in close collaboration with the others in order to develop an awareness of the essence of the visual arts, both traditional and contemporary. This underlying philosophy is reflected in our curricula.

Through an interaction with diverse practicing professional artists, architects, academicians, scholars, archaeologists, art historians and designers, students are exposed to the importance of ideas, concept development, intuition and the value of research in the development of the creative process.

We shall not feel content till we have succeeded in preparing our graduates to live in the world of tomorrow, enabled them to share in the responsibilities for social, economic and political problems and to apply their professional knowledge and abilities to the solution of such problems, so that besides being technically and aesthetically literate, they are above all, good human beings.

Vision 2025

To impart education in art, design and architecture creating a culture of excellence in research and innovation, contributing towards a just and tolerant society and enable students to serve as instruments of positive change.

Core Values

A member of the IVS community:

Has a passion for Learning. Strives for excellence. Is ethical. Has dignity and humility. Values criticism. Embraces diversity. Respects the environment. Works towards positive social change.

The city of Karachi is home to a number of neglected and misused urban spaces. The thesis focuses on how such spaces can be transformed into meaningful places that encourage communal integrity, promote health and economic well-being, and foster a sense of belonging within a community. In order to achieve this, it takes into account the concept of place-making to cultivate a portion of the Clifton Green Belt as a social hub on a neighborhood scale. The key is to undertake a people-centered approach towards design and planning, capitalizing on present activities in and around the site, while creating opportunities for new ones.

In-between urban spaces as opportunities

Adnan Naeem

mnk7894@hotmail.com
0345-2859657

The project explores kinetic architecture as a strategy to deal with the issue of inefficient use of space. It focuses on how spaces that are mono-programmed or function only for a brief amount of time, can adapt to accommodate different functions from time to time, through real-time transformation of architectural elements such as shading devices, flexible walls and adaptable furniture.

Activating underused public space through kinetic architecture

Bariya Hussain

bariyahussain@gmail.com
0323-2565361

The thesis aims to instill a sense of permanence to a threatened ephemeral entity; local market spaces. By creating a system which temporarily occupies the space to reprogram the function on the existing site. The intended market space is situated in a current parking facility which will transform from its former function into a public urban plaza which celebrates local craft and culture. The tectonics employed is drawn from local context responding to its commercial and mobile needs. The multiplicity of function allows permanence to an ephemeral program while creating an order that temporarily programs a space into a public plaza.

Ephemeral Architecture as a prototype for Market Spaces in Karachi

Due to habitat fragmentation and an anthropocentric approach towards development, constantly expanding urban settlements have majorly damaged ecosystems. This calls for a paradigm shift in the way we think about our built environment, both on macro (city) and micro (building) scales. The thesis advocates for the need to shift from an anthropocentric approach towards architectural design to an ecological one. Through the application and practice of Ecomimetics, it explores ways through which architecture itself can serve as an agent for harmonizing the built and natural environments, while preserving ecological diversity and maintaining ecological balance. The exploration takes place in the biologically diverse parameters of Karachi University, a setting home to both human and non-human users.

Architecture as an agent for rehabilitating the natural environment

Haya Qadri

hayaqadri@hotmail.com
0333-0252660

This thesis explores how architecture can serve as a medium for celebrating and enhancing the identity of place. Key is to understand the physical, socio-cultural, climatic and historic conditions that make up the identity of a given location, and to use this understanding to develop a place-specific architectural response. The site is located in Rohri and sits at the center of various natural and built features that shape the character of the city.

Celebrating and enhancing the identity of place
through architecture

0333-2288523

The thesis investigates how public spaces can create a sense of place in dense urban settings which are home to diverse user groups and stakeholders. The concept of placemaking becomes a means to interpret the site and its surrounding conditions (physical, social and cultural), to identify potential user groups and stakeholders, to establish a framework for an appropriate design and planning response, and to develop an association between people and place. The site is located in the historic area of Saddar bordered by the DJ Science College, Sindh Textbook Board and the Sun Dial Chowk

Placemaking as a means to create synergy between site and context; between people and place

The physical environment of existing rehabilitation centres for SUD (substance use disorder) patients in Karachi only deters their physical and mental health further. The aim of this thesis is to address the architectural and spatial qualities of such centres in ways to stimulate the process of recovery for their inhabitants. To achieve this objective, this thesis explores and incorporates the principles of biophilic design as a basis for ensuring physical and mental well-being, reducing stress, and improving cognitive function of SUD patients.

Biophilic design as a means for physical and psychological rehabilitation

Marium Hanif

mariamhmymini@gmail.com
0323-3366658

The architectural and spatial qualities of public educational buildings, such as public libraries and museums, seldom stimulate and cultivate human imagination towards scientific and artistic ends. The thesis advocates for re-thinking such buildings as arenas for activating human imagination. In order to achieve this, it explores and incorporates the concept of "play in architecture" around and within a proposed Imaginarium in Karachi.

Activating human imagination through play in architecture

zntalpur@yahoo.com
0332-3512418

For the longest time, architecture in the rural areas of Sindh has shared a mutual relationship with the natural environment. More recently, however, this relationship is beginning to weaken, with new development revealing little or no consideration for the natural setting. In view of the positive impact of nature on the human mind and body, the thesis advocates for the need to maintain a positive relationship between the built and the natural systems. It takes into account the principles of biophilic design to develop a framework that allows for a strong affiliation between the two.

Improved Human Functioning Through Architecture and NaturePlay

moeez.rahim26@gmail.com
0331-2800929

Placemaking refers to the collaborative process by which we can positively shape the public realm. It centers itself on a human-centered approach and advocates for inclusivity and well-being. The thesis adopts placemaking as a strategy to develop meaningful shared spaces in socially, economically and ethnically diverse communities. Key is to understand how people with diverse backgrounds operate in such communities, and to use this understanding to develop an appropriate architectural response - one that celebrates coexistence, yet remains sensitive to cultural differences.

Placemaking as a medium for developing shared spaces in diverse communities

Due to scarcity of land in densely populated areas of Karachi, urban open spaces for public use, such as parks and playgrounds, are increasingly becoming home to built structures. Appearing as "territories", these built structures accommodate various needbased functions ranging from institutional to commercial and catering to a diverse set of users. At the same time, however, they are defeating the very purpose of the public spaces they inhabit, which is to serve as arenas for communal sociability and recreation. The thesis aims to address this spatial paradox in one of the most densely populated areas of the city, i.e., Lyari. The intent is not to erase territories from the public realm, but to rethink their architectural characteristics in ways that they do not erase the social value of public spaces.

Countering the public space paradox in densely populated cities

Muhammad Haroon Shakeel

m.haroonshakeel@gmail.com
0336-2296988

Well-designed community spaces are an integral component of successful communities. They not only enhance their physical and environmental qualities, but also serve as avenues for social interaction, inclusion, cohesion, and well-being. Moreover, they can spur economic prosperity and revitalize declining communities. The thesis aims to re-think neglected urban open spaces embedded in the fabric of Karachi as opportunities for vibrant community spaces and hence community revitalization. In order to achieve this and arrive at an appropriate design solution, it takes into account the concept of regenerative architecture which responds to and utilizes the living and natural systems that exist on a site, in this case, one which is embedded in the heart of Orangi Town

Revitalizing communities through regenerative architecture

raasmiaminalhaque@hotmail.com
03345-446590

This project aims to create a relationship between the architecture and its context. By means of 'commensalism', a 'symbiotic process' where the new intervention and the existing typology benefits its surroundings. The project intends to add a public front to the time-based typology so that the architecture can be utilized throughout the day. The project aims to give a solution for densification by bridging the two contrasting private and public realms by defining a new function that can benefit communities located around the structure, in-between spaces and common spaces of interaction between the two interventions which allows sustenance of both. The program will act as a unification point for public and private activities by allowing a connection spatially and socially.

Symbiosis as a means to ameliorate social interaction in dense communities

Sakina Hassan

sakinahassano2@gmail.com
0333-2249646

The environment triggers people to think, reflect and behave in certain ways and aids in the process of self-learning. Therefore, it is imperative for architecture to be sensitive to the experience it generates. Since informal learning is devoid of an instructor, the triggers from the built environment influence the learning experience. The aim of my thesis is to design a Public Library in which spaces facilitate learning. By applying the theory of "built pedagogy" (architectural embodiments of educational philosophies), the Library will house an environment conducive to intellectual development.

Architecture as an instrument for learning

Mushrooming infrastructural development has surfaced a number of urban pockets or leftover urban spaces in Karachi. Lacking ownership, such spaces are often encroached, misused and vandalized. The thesis aims to re-think these spaces as dynamic community spaces without eradicating the diverse social and economic activities that are already functioning within them. It aims to better organize these activities, while providing opportunities for new activities that can benefit life in the surroundings. The setting is the portion of space underneath the NIPA flyover. Jan Gehl's theory of public space becomes a basis for transforming this underutilized and misused space into a meaningful community space

Transforming urban pockets into meaningful community spaces

Built or man-made settlements range in scale from neighborhoods to entire cities. As settings for human activity, they present a narrative which is embedded in their physical, social and cultural realities. In order to arrive at an appropriate architectural design solution in such environments, it is incumbent upon architects to carefully identify and interpret these realities. In other words, it is incumbent upon them to carefully read and understand their narratives. This thesis investigates architecture as an extension of the narrative of specific human environments. The setting is Goth Sai Khan, a low-income neighborhood by the docks of Karachi, which tells a unique yet familiar story.

Architecture and the narrative of human environments

Permeability can be understood as the ability of a substance to allow another substance to pass through it. In the context of architecture, it can be employed as a strategy to create greater dialogue between people, spaces and activities, both on architectural and urban scales. The thesis incorporates this strategy to dissolve boundaries between art and the public realm; between architecture and the urban context. In the process, it aims to transform an urban space in one of the cultural precincts of the city into a vibrant public space that encourages interaction, inclusion, artistic expression and cultural transmission

Permeability as a medium for dissolving boundaries between people, spaces and activity

zoa.naqvi@hotmail.com

We tend to think about life within buildings, but rarely do we think about life 'between' buildings. This thesis aims to use an underutilized site to create an urban oasis that symbolizes new function and gives meaning to existing environment. Functions like pedestrian movement, inter-connectivity, and gathering spaces are designed to revive community life that has been lost.

An oasis in-between

In Pakistan the twin problem of malnutrition and stunting is wide-spread among all ages. According to the National Nutrition Survey 2011, one-third of all Pakistani children are underweight with 44% being stunted. Tharparkar in Sindh has the highest number of stunted children 66%. Despite 61.6 million dollars from WHO, 14 million dollars by UNICEF and 35 billion rupees by Sindh Government being spent in Tharparkar in 2015 / 16, the graph remains the same since the year 2000.

My documentary explores the causes of this issue and calls upon people to join together in raising a voice for an investigation into this problem.

Jamjoji is a compilation of food memories that have been painstakingly collected from the community, and the recipes that go along with them. These stories have been converted in to multi-media and housed online in a way that is accessible to youth and young adults, particularly those of the Parsi community living abroad. Jamjoji also offers a monthly subscription box service for Parsi food that delivers the ingredients, along with a storytelling component for those wanting to recreate authentic Parsi food in the simplest way possible. By weaving food and narratives together in the real and virtual world, Jamjoji hopes to forge a deeper sense of belonging to the community through this aspect of Parsi culture that is to be enjoyed and shared on a local and international scale.

Born on the 25th of November, 1916 and migrated to Karachi, Pakistan on the 17th of October, 1947, Mr. Khan was a Pakistani archivist, writer, photographer and musician who's zeal for the Arts and Culture and compulsion to preserve history led him to establishing a privately owned archive museum that is home to South Asia's second largest Audio Collection. The archives and museum have been closed to public for many years, however, the family of the archivist is now considering the possibility of reviving the institution for the public and hosting exhibitions showcasing the archivist's collections. As a designer I have developed a visual identity and a marketing campaign for to the museum to create awareness about the first phase of exhibitions.

In our society, choosing a career can be a tough decision for students. What makes it worse is the lack of guidance and support from parents who themselves are unaware of suitable career options. Moreover, most parents impose their decisions on their children, without even considering their aptitudes, aspirations, and ambitions. 'Pathway' is a unique project which urges parents to play a supportive role in the career development of their children. It involves parents and children exploring suitable career choices together and charting out a career development path for children.

My strategy behind Pathway is to raise parental awareness regarding possible career options and to help bridge the gap between parents and children on career-making decisions.

My work investigates human interaction and its traces. Moving into a new household, and with our busy lifestyles, assembling for dinner at the table was the only time I got to interact and bond with my new family members.

Hence, through my paintings, I have tried to explore how the dining table commonly plays a key role in fostering communication, thus, facilitating social and communal behavior.

Through a series of large-scale paintings and a hyperbolic color palette, I have attempted to depict the kinds of conversation and dialogue that occur, amidst shifting moods and unfamiliar settings.

For me newspapers holds sentimental value are such items as they remind me of my father. With him being away in Sudan for most of the year, the newspaper collects and grows into a redundant pile. The concept of 'the newspaper' only holds value and meaning when my father is around to read it. Hence my work is about how newspapers can be stacked in different ways. My research began when I noticed hoards of newspaper stacked into a corner, neglected and forgotten. Stacking newspapers into structures, the concept of the newspaper becomes a symbol of my father's subconscious presence in the house while the structure formed by the newspaper represents his absence.

We always strive for perfection and in the process forget the imperfections which are inherently present in all of us. In my paintings, I depict imperfection by distorting daily life objects which we use to cover our flaws. The work portrays a truth that is universal and beautiful yet potentially abhorrent for us to accept. I use objects such as books, because no matter how much we read to gain knowledge we can't know everything. This extends to other everyday tools that I have shown in my paintings. No matter how much shampoo, soap, cream, makeup we use, we can't attain perfection of beauty.

Perfectly imperfect

My drawings show the eventual decay, rot or preservation of things, living and non living, discarded and neglected after use, after their purpose has left them or have just simply expired. Every 'thing' had its story and in a snapshot of a drawing is frozen in time. I hoped to capture the inevitability of decay and death and its toll on the things around us. It's toll on a flower; that ended in a bin next to a Marlboro.

Stills of Decay

My work investigates the connection between shape and form, inspired by the basic geometric shapes found in architectural constructions. It explores how a simple 2-Dimensional surface creates a figment of 3-Dimensional perspective around these shapes and structures. Inspired by the visual and concept of the Lego- I have integrated shape, form with colour. The simplicity of my work allows the viewer to interpret the illusions to their own understanding.

Reconstruction

My work is about the artifacts of tomorrow. I have used parts of electronic devices which we use in our daily routine, like computers, mobile phones and remote controls to create the archeological artifacts from them. These parts include computer chips, electrical plugs and wires. I chose these objects because I think they define today's time perfectly. Each piece is inspired by an archeological artifact and comes with a description.

Objects and their narratives

One inhabits a space in terms of objects. The visuals under study are used as a metaphor for the human body and the work functions as an unfinished inventory of fragments: like the de-skinned objects that create an almost violent sense of absence or abandonment. Stemming from the utilization of the entire body when engaging with the paper, the body of work has evolved to taking hostile impressions of everyday objects.

This Is Not The Last Impression

My work revolves around Television noise which I encounter on a daily basis. It is quite displeasing and unavoidable, since watching Television has become a ritual at our home which can't be ignored. I began to capture the visuals of television through the lens of my mobile phone which have helped in acknowledging and highlighting the layers of 'noises' lies underneath. Captured images has helped me to create a visual language and to express my feelings through my paintings which I later began to relish and becomes the source of cathartic.

Through juxtaposition of raw and processed industrial materials, this body of work aims to challenge, create and transform aesthetics to form a new visual language and renew relations with nature. We see representations of opposites manifesting all throughout nature, through investigating the visuality and relativity of conflicting narrations, an integral part of my process. Even order and chaos have characteristics relative to each other by way of perceiving it through the growing and spreading of branches, its repetitions and progressions of patterns; a perfect example of self-similarity, as nature's most favored design principle, also exists in the culmination of society, culture and its varying habitats.

Since my childhood I had the habit of disjoining toys to understand their mechanisms. The curiosity of knowing more about mechanisms led me to build instruments by using daily life objects that are used to pour liquids such as taps, funnels and kettles and amalgamating these with machines that are controlled by motors or by nature. These new objects are meant to create paintings and new tools that assist paintings.

The work emerged from the emotional undercurrents we carry, and the notion that memory can be both resilient and unreliable. We remember isolated details: a voice, a laugh, a smell, a certain space. The imprint in the mind is always a ghost of the moments we try to recall: sometimes overlapping or ricocheting off one another and colliding into chaos; drifting into obscurity, but always leaving traces of themselves behind.

The layers of separate mediums become metaphors for layers of memory, the physical process of creating and obscuring echoing the ways in which our own minds alter our remembered realities.

My work revolves around architectural spaces which have been inspired by stories published in newspapers. By fictionalizing and decontextualizing the details of these stories I have tried to create spaces where these incidents may have occurred. I have particularly focused on showing different perspectives and angles to highlight various moods and emotion within my paintings.

Fictional Trajectories

Sanya Hussain

sanyaahussain@gmail.com
0321-2087317

Intrigued by the idea of how one develops a relationship to a space without physically experiencing it. I have fictionalized the visuals of my mother's childhood home as I perceive them, based on oral descriptions, old photographs and by studying other similar houses. The process of photographing other people's houses, their personal spaces, felt like an intrusion into their homes and hence my work also comments on ideas of voyeurism and surveillance.

The language of my work mirrors the language of "postmemory" to imagine and recreate a space not bound by the constraints of the original architectural plan.

Lack of interaction always develops a sense of curiosity within an individual, the curiosity of knowing the other person. Being in a neighborhood for nearly two decades, my work will be reflecting on how casual interaction with neighbors in current times has become a matter of formality as they are very reserved.

My work consists of paintings and projections which not only include the visuals of my neighbors' houses but also the activity signifying human presence in a house, through the act of 'peeking'. The act of peeking merely represents the longing of interaction with the neighbors like older times.

It is interesting for me to see how lifeless objects like clothes, furniture and empty hallways can outline a person and fulfill their spot when they are no longer amongst us. My work revolves around the concept of how a person's presence is still felt even after they've passed. The inspiration of my work lived in a house built in 1965. My grandmother, the model of my work left emptiness and a certain stillness in the same place which was once her home.

This emptiness is what I persist on showing through my work. In doing so, I try to showcase situations and her archived objects around me which live under the shadow of her reign- my grandmother called Rosie.

A cars unique potential to afford freedom and compromise safety is a formal focus. We expect roads to be fairly straightforward. You go straight maybe you turn left or right once in a while, that's not always the case. Intersections usually defy common sense. We all know driving can be a maddening exercise, one of the reasons many choose to avoid roads like the plague.

Velocity can become thrilling unless the matter becomes very serious. 'Speed' has become 'still' in the roads of this thesis work. The eeriness compels to stop thinking about any kind of movement and come to a 'stand still', where the occurrence of a deadly incident has stripped the life out of the area

Coming from a Dawoodi Bohra community, the Rida is a communal attire, which women wear in order to cover themselves. My work by identifying the Rida as a form of protection. Referring to this, my research and observations led me to capture visuals of various covered objects in my surroundings - among public and private spaces such as streets, markets and houses in Karachi. The visuals that I have chosen are meant to connect and relate to the viewer because clothing and covering is one of the basic human necessities; it is through the cloth or 'chaadar' that one often seeks protection. This notion is reflected in my study of objects like vehicles, food and other valued material that have been covered by their owners, to shield them from any kind of external harm or damage.

Description: The aim of this project is to introduce a new form of theatre in Pakistan which is called immersive theatre- In immersive theatre, the audience are not merely passive bystanders. They are part of the story, however small their role may be, and they are in the middle of the action. The idea is to bring all facilities related to theatre under one roof such as makeup unit, costume design unit and set design unit. Over here people will get a very intimate experience of theatre, it will not only be the 'seeing place' it will be an experience which involves all human senses.

My audience is people who are interested in theatre, and also who are looking for new activities in Karachi.

The project aims to design the Christian Dior's boutique hotel in Karachi to give a boom to the hospitality and tourism industry which is at an incredible pace amid growing economic activities and to make more people aware of the brand. The idea is to celebrate the luxury and have an interior which inspires the brand-conscious people out there.

Dior being a French brand, people can get the true essence of French classical interiors and Christian Dior along with the tranquil views of the golden beaches, the Arabian Sea and the sunset in Karachi. It has been designed for the people who want to feel special, grand and high-end.

Karachi's coastline plays an important part in defining the city's identity. However this significant feature's potential is largely untapped. The National Sailing Centre, along with being located at a prominent and approachable location on the creek also holds strong historical importance. It is the first sailing center to be built after partition (1996) and through creative design can be further developed as an important recreational site offering watersports and other activities on the creek.

Any illness is merely a loss of balance and there is a need for integration with the natural ability to heal and regenerate. When a cancer patient is in their last stage, they need an environment that not only feels safe but also heals at the same time. Palliative care is a neglected issue in Pakistan. This project aims to provide informal activities and therapies that encourage new relationship formation and comfortable non-clinical treatments. Currently the only functioning hospice in Pakistan lacks sensitivity in terms of aesthetics and functions that are informal. The design will be inspired not only by elements that will arouse comfort and security but also by the surrounding elements the patients are used to. My aim is to achieve a design that is familiar and rooted in catering to the unique needs of patients that are dealing with death.

This thesis is co-related with one of my childhood memories where growing up in Karachi with a diversity in cultural layers living around our neighborhood. Exploring that diversity in those minor communities that have a distinct way of eating etiquettes and cuisine. Unifying them on one platform, using food as a symbol. Since Karachi is known for its diversity due to the multi-ethnic cultures, still there is no space to interact with those cultures or communities on a public platform. The food and culinary rituals of the Bohra community, the Parsi community and the Hindu community will be explored through design. Promoting, interaction, communal eating and celebrating the ethnic feast within one space.

Pre-school programs provide early childhood education and care for children and help them to develop a range of skills. In Karachi city a large number of children are going to bungalow schools, where the residences of all sizes have been converted into school with limited consideration for the design requirement of a proper pre-school. I selected St. Joseph Convent School because it starts from primary, so I want to design a preschool on this site which will provide them a child and nature friendly environment. I choose building block as my concept because young children start learning from blocks different shapes, i used it in my design so that children will learn from their surroundings.

The proportion of old homes are ironically swelling in our society and these homes are mostly impregnate with people who are displaced from their house holds. The concept is to provide community within a common space enabling the residents to celebrate the wisdom of generations and cultivate a lifelong bonding. The blend of children and aged would counterbalance the loneliness of people living in old homes via social interactions with the children and would serve as a healthy living environment for both of them

Aim: (1) To integrate childcare facility within an old age home. (2) To allow opportunities for social interaction between residents and children up to 4 years old and (3) To enhance their social/emotional development through interactive learning activities.

A shopping mall is a modern term in which huge buildings from complex of shops representing merchandisers with interconnecting walkways that enable customers to walk from unit to unit. In Karachi the pounding of malls started taking place from 1998 in which one of the most celebrated malls was Park Towers. Within a passage of time the mall culture started to grow due to the launch of diverse range of brands and more space requirement. Hence Park Towers being the marks of Karachi has lost its identity. So the idea is to revitalize park towers with the essence of contemporary design, by highlighting the central atrium with a redefined experience through connecting view ports along the voids by providing seating spaces and interactive installations.

This thesis is a retail design project entitled for Behbud Boutique; an organization destined to promote skills of the underprivileged women of the society. Therefore, the concept for the retail outlet; is to define an experience of celebrating local craft through modern interiors, showcasing a live display of our beautiful handcraft and artisan skills. The design for this outlet is inspired by our traditional Pakistani textile, patchwork technique called: 'Ralli' that envelope both culture and modernity with an overall raw, industrial, ethnic, interior scheme. However, the approach to design not only fulfills the idea of a retail outlet but it also aims to educate people through craft history and generates further income through an addition of Behbud Café.

"Waste isn't waste until we waste it"
William James Adam

My thesis is based on creating surfaces from left over patterned denim scraps that are of limited use that is recycling. I have taken the concept of sustainability through design to a socially responsible level in the sense that my thesis will offer new possibilities for making use of wastage. In this project, I have explored multiple techniques of fabric manipulation and thread manipulation to achieve a creative look for denim. The surfaces that I have explored will highlight both eastern and western garments.

WASTE, No more!

The source of inspiration for my thesis is my mother and the memories I have of her. The relationship between a mother and child is all about comfort, warmth and love. Therefore, I have designed a range of pillows for this project which are functional, keeping in mind the key idea of providing comfort. Furthermore, I have added different scents in these pillows because scents can give you flash backs of your memories. Aromatherapy for a person using essential oils and plant materials are used for psychological and physical well-being. The prints for my pillows are inspired by the things which I associate with my mother's life like birds, ducks, parrots, fish, pigeons, jasmine flowers, roses, basil leaves and chicken kari embroidery etc. Using a soft color pallet, my prints have a contemporary feel to them which are for all age groups.

Reminiscing-In the loving memory of my mother.
